LMS EXAMPLES

Learning Management Systems

Why a LMS?

As teachers become more and more familiar with using the technology in the classroom, they are going to need a place to post websites, assignments, due dates, rotation directions, and much more. By housing the information in a Learning Management System, the students are able to access all online content from one location on their own pace, place, and path.

Google Classroom

Is Google Classroom a Learning Management System? No, not yet. Google Classroom is a great place to get teachers to start to post links, assignments, and classroom directions but it is not considered a LMS yet. Google Classroom is a Google Drive organizational tool for the classroom environment. Read more about Google Classroom by clicking on this link. http://bit.ly/29UQbgG

How to use Learning Management Systems

It is important that the teachers start to use some type of learning management system in their classrooms. If a school **does not have a LMS**, start to think about how to create a digital platform for the teachers. For example, the teachers could

• Create a website to hold the information. We tend to use weebly.com as website creator for the teachers
• Build out a blog with blogger.com
• Google Classroom if the school is GAFE

How to use a true LMS in a blended learning classroom setting
• Post assignments
• Discussion boards
• Track student participation
• Organize the content by modules or units
• Use if then statements— if you complete this assignment with 90% or high accuracy, then the next module will open up
• Post quizzes and test
